spearheaded by Herbert Friedman, chairman of the National Research Council INRC Commission on Physical Sciences, Mathematics, and Resources. Following an informal discussion of the program I year ago, Friedman publically suggested the international program in April 1983 at the annual meeting of the National Academy of Sciences at a symposium marking the silver anniversary of the International Geophysical Year (IGY). Three months later, the U.S. National Research

Council (NRC) gathered more than 40 sclentists, government officials, and NRC staff at a workshop in Woods Hole, Mass., to consider the solar-terrestrial system.

tion," writes Friedman in the preface to grams of synoptic observations focused on common, interrelated problems that affect

the earth as a whole" are needed.

## **Elastic Lenses** in the Earth

Seismic waves in the earth's crust and mantle are known to be sensitive to tlensity contrasts over large volumes of rock, which contrasts terul to cause focusing effects. The end results of such effects observed at seismograph stations are hard to detect unless sufficient arrivals are sampled. It is a common fault to confuse such effects with those of incal structures and properties. In a study of teleseismic, short-period [1 s) P-wave traveltime residuals and variations of amplitudes in western North America. R. Butler of the Hawaii Institute of Geophysics has found a high level of correlation to which he attributes qualitatively the focusing and defocusing of seismic waves (Nature, December 15, 1983). The correlation indicating that skew travel times relate to higher, and fast travel times to lower, amplitudes of scismic waves measured in western Nurth America. Conversely, faster travel times and higher amplitudes are generally observed in easiern North America [defined as stations located east of the Rocky Moumain frontt. Although there may be less attenuation of seismic waves in the upper mantle beneath eastern North America, indications are that the degree of attenuation is highly variable. According to Butler, "On the large scale, the variations between western and eastern North America are probably rooted in lateral differences in temperature. Higher temperatures beneath the tectonically active west produce higher attenuation of P-waves, lower velocities in the upper mantle, and high surface heat flow." The focusing and deforusing effects of low and high velocity lenses, respectively, may be most effective if such lensese are located close to a seismic station, Butler ooted that leases, or anumalous regions, must have thintensions of one of more warelengths of a P-wave, which trans-lates to a minimum dimension in the earth of 6-8 km (for 1-s period waves). Positive correlations have been observed characteristically over large seismic arrays, suggeting the existence of lenses of several tens of signare

kilometers in cross section. The elastic focusing effects observed in western North America for P-waves are observed for S-waves as well. Likewise, the lack of a systematic relationship is noted in easteru Nonh America. Cause is attributed to differences in tectoric activity between the eastern and western portions of the conti-

Geo-Biosphere Proposal

An international, interdisciplinary program to study the closely coupled system of the terrestrial environment and the life that inhabits it has been proposed for later this ilectate. As currently outlined, the International Geosphere-Biosphere Program (IGBP) would en-compass at least a decade of research and would involve a host of trations. IGBP would embrace studies of physical, biological, and ecological processes. The program, which will focus on global change, will be one of the major topics of discussion this fall at the General Assembly of the International Council of Scientific Unions (ICSU).

Development of the concept for JGBP was the inajor problems for research in five areas that might be coordinated in IGBP: the atmosphere, oceans, lithosphere, biosphere, and

Global change was the unifying theore of the workshop, which Friedman chalred. "Of pressing importance is the need to under-stand the often deleterious effects of madem man on natural processes, such as the inevitable climatic impact of carbon dioxide loading of the atmosphere since the industrial revolu workshop's report. "Progress in understand-ing global change will require extensive and l-organized observations made over much of the earth and over a long period of time. The scope of such an effort requires interna-tional cooperation and interdisciplinary em-phasis," he added. "Coordinated efforts between adjacent scientific disciplines and pro-

"A major challenge to an JGBP will be that of understanding the causes and effects of ellmate change," the workshop report states.
"Variations in the earth's climate appear to follow from a long and convolved set of interactions including human and other biological activity, solar radiation, volcanism, ocean circulation, polar ice and land effects, and the chemistry and dynamics of the atmosphere it-

ICSU will consider the NRC proposal at the ICSU meeting in Ottawa, Canada, Sep-tember 24–28. A 1-day symposium will focus on the rationale, possible themes, and potential activities of such an international prograin to study global change. Commissioned papers will summarize scientific developments over the past 25 years and assess fu-ture prospects for illuminating the interactions of the geosphere and biosphere. For al-ditional information, contact either of the two convenors: Thomas F. Malone (Unit 203, 5 Bishop Rd., West Hartford, CT 061191 nr Juan G. Roederer (Director, Geophysical Institute, University of Alaska, Fairbanks, AK 99701). ICSU is an international, nongovernmental scientific organization composed of IA scientific unions. The International Union of Geodesy and Geophysics is a member of

Before the September meeting, though, the NRC will try to discuss the proposal in as many furnuts as possible, Friedman unld Em. Another workshop will be held in June to examine in more detail possible IGRI urugrams. In addition, Friedman said there will be an attempt to set up a symposium at the 1984 AGU Spring Meeting in Cincinnai, May 14-18.

Several years of planning would be required before the proposed program could actually get under way. Much of this planning would involve courdinating the nearly 30 Observing and monitoring programs al-ready in existence or being planned. Such programs—including, to memion only a few, the Global Atmospheric Research Program, Tropical Oceans and Global Atmosphere, World Ocean Greukation Experiment, Upper Atmosphere Research Satellite, Origins of Plasmas in the Earth's Neighborhood, and the International Geological Correlation Program—focus too narrowly to understand the interplay, the NRC workshop report states; it says that to link the problem areas of the geosphere and biosphere the scope of these programs must be strengthened and exemi-

A new NRC committee on the ICBI', chaired by Jack Edily of the National Center for Aunospheric Research, will hohl its tirst meeting in March, Other NRC boards and committees dealing with related sciences are being asked to initiate discussions of their own to feed information to Eddy's committee, Friedman said.

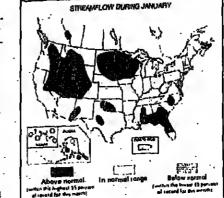

Copies of the Woods Hole workshop teport, Toward an International Geosphere-Bro-sphere Program: A Study of Global Change, are available in limited supply from the National Research Council, Commission on Physical Sciences, Mathematics, and Resources, 2101 Constitution Are., N.W., Washington, DC 20418.-BTR

## January Streamflow

After a wet December that produced tecord high streamflows in many states. flows generally decreased thiring January, although many streams in the Gulf Coast region and the West were still Howing at rates well above average for this time of year, according to the regular monthend check of natiunal water conditions by the U.S. Geological Survey

USGS hydrologists said that only 35% of the 171 key index gaging stations across the country reported streamflows that were well above average during January. In contrast, 73% of these key gaging stations had report ed well above average flows in December. The number of stations reporting well helow normal flows increased from 13 stations (7%) in December to 25 starlors (14%) in Jamary.

Record or year record high flows were set at USGS stations in Colorado, Irinhu, Minnesota, Minitana, North Carolina, mil Utah. The flow of the Snoke River near Heise, Idahn, for example, averaged 10.2 billion liters per day [bhl] (2.7 billion gallous a day), the highest January flow in 73 years. Flow of the

## Geologic Research **Opportunities**

I read with great interest the recent account in Eos of the National Research Council's Board of Earth Sciences (BES) report on "Opportunities for Research in the Geological Sciences," and find the report to be an excellent vinimary of exciting research areas in continental geology (Ess. December 20, 1983, p. 985). However, the title of the report implies that the earth sciences as a whole are treated, and as such the report is plagued by several. glating omissions. It is important that these emissions be recognized because, as mentioned in Eos, this report will be used by government administrators to set prior dier for houre emphasis in federal faud-

The neglerted topics include marine ge-obgy and geophysics, place tectumics, pa-lenceanography, and paleochmatology. Inmically, these may have been neglected because research in these areas has been so successful in the last 2 decades. As an aftermath to the extraordinary breakthrough related to marine geology and plate tectories in the 1900's and 1970's, there has developed an atmosphere that I call the "post-plate-tectonic lidnes," In-deed, the discovery and verification of plate recomissis a rough act to follow, and so it is natural for the pendulum to swing toward important problems in continemal geology. While such a swing is an understandable response to the last 2 decades, it is dangerously short sighted.

Developments in marine geology and in plate rectories in particular have provided a unified theory for the understanding of many heretolore seemingly unrelated geologic phenomena. As a builving concept in the gerdogical sciences, it is similar to the themy of evolution in the laological sciences. Nearly 100 years later, research is still vigorous or relining ideas and discovering ties areas in evolution and genetics. In fact, evolution of file is listed as one of the right major research areas in the BES (epor). In a similar way, 20 years later, important areas remain to be soulied in marine geology and plate rectoric theory. The broad-based acceptance of place tectories as a theory does not mean that research in this area is warning, anymore than the acceptance of evolution as a theory signals the defined of research in

that area. On the contrary, marine weeks gy and geophysics remains among the most exciting research areas in the earth sciences and is undergoing something of a Renaissaure owing to the development of new irchinologies such as SEA BEAM and SEA MARC I and II. It is a youthful and growing field in which exploration is still a key activity (for example, the discovery of ldack smoker vents, propagating riles, and overlapping spreading centers, to mane

only a few).
The otherwise excellent BES report should either be retitled "Opportunities for Research in Continental Geology," or it should be anneaded to include the rather critical conissions in the areas of marine geology and plate tectonics research.

> Ken C. Mandonald Department of Geological Sciences University of California Saute Barbara, CA 93106

## Reply

In response to Professor Macdonald's letter regarding Opportunities for Research or the Gralogical Sciences, I would like to point out the lallowing considerations.

1. The report itself states on page 1 that it "examines those research opportunities." that are pertinent to the programs of the National Science Foundation's Hivision of

Earth Sciences," 2. Marine Gridogy and Graphysics (So) tion E. p. 59 of the report is one of the two research ages identified in chapter 3 of the report as othering major oppositing ties and challenges for Inture research in the geological sciences. The other four arcastile) surface and near-surface processes and the environment, commental blocks; earth's interior; and earth in the

sidar system. 3, On page 59, the report further states that. "Because marrie geologic and marine geophysics are not lumiled through the Earth Sciences Division, extensive discussion is not presented here. The opportuunies in these areas have been described in the Cristin, George Contact (Gorones, and Continental Margine reports 2

William R. Dickinson Charmen NBC Commence on Physical Sciences, Mathematics, and Resource

Mississoppi River at St. Paul, Minn., averaged 21.6 bid, the third highest January Hos succe reconfliceping began at that station in 1892.

The combined flow of the nation's three utajor rivers—Mivissippi, St. Lawrence, and Calumbia—reflected the general decrease in lanuary sitemplifies. Hecreases in the average flows of the Mississippi and St. Lawrence rivets for the month more than offser a large increase in the how of the Columbia River. Their combined average flow of 2.313 ldd was down 30% from last month and 2% below the long-term average. These three riv-ers, which drain more than half of the lower 48 states, provide hydrologists with a quick, useful check on the nation's water resources.

Hydrologist Hai Tang of the USGS National Center in Reston, Va., taid that reduced precipitation in January contributed to the decreased streamllows. He mited that severe culti weather in many areas caused ice jams that produced localized flouding in Irlahn and low-lying areas in lowa. Other lowland llouds occurred in the South Atlantic, Gulf Coast, and Pacific Nurshwest states. At month's curl, an ice jam about 900 km in length existed on the Missouri River alsove Jefferson City, Mo.

ing January. The levels in most key index wells were average to alsave average for the month. Wells in Carlifornia, Maine, Nebraska, and Nevarla reached record-high levels for latuary. Grandwater levels tose in most leep wells in irrigated ateas in Nebraska, reflecting a seasonal recovery from irrigation withdrawals. Two key index wells near Ewing and Dansting teached their highest January levels in 50 years of report. Although the water level in a kry imlex well in the El Paso. Tex., area use during January, the level near month's end was still nearly 5 in below average for thir time of year, and the bacest Janur are level in 20 years of record. Index wells in Georgia, and parts of hove and Louisiana showed groundwater levels below the long-

term average.

Average linws of the natiral's live largest rivers were down substantially from December, with only the Columbia River showing an nerease from last month. Flows of the "Big Five "rivers were: Mississippi River at Virka-burg, Miss., 1,370 bld, 13% below average and 43% less than the flow in December; St. Lawrence River at Massena, N.Y., 583 blrt. 4% above the monthly average, but a decline of 10% from December: Columbia River at The Dalles, Ores., 360 ldd, 70% above the long-term January average and an increase ref

55G from December: Ono River at Foursville, Ky., 246 bld, 42% below the January average and a decline of 51% from the previous month; and the Mission River at Hermann, Mo., 125 fdd, 51% above the January average, but down 40% from the December

## **Fellowships** in India

To an effort to encourage stronger research ties between India and the United States, the Imlo-U.S. Subcommission on Education and Culture is offering 12 long-term and 9 shortterm research fellowships in India in 1985 and 1986. The only requirement is that the applicants be U.S. citizens at the postdoctoral or equivalent postdoctoral level. The awards have no restrictions as to field of study, and because the program seeks to open new channels of communication between academic and professional groups in the two commtries, those who have had little nr no experience in Iodia are especially encouraged to apply.

The long-term fellowships are for 6 to 10 months, with a monthly allowance of \$1500. Lung-term fellows will also receive travel money aml allowances for dependents. The short-term awards, for periods of 2 to 3 months, also offer a monthly payment of \$1500. Finning for these lellowships is provided by the U.S. Information Agency, the National Science Foundation, the Smithson-

ian Institution, and the Government of India.

Applications for the program must be received by June 16. Forms and further information are available from the Council for Interitational Exchange of Scholats, Attention: Indit-American Fellowships Program, 11 Du-pont Circle, Sulte 300, Washington, DC 20036; telephone: 202-893-4985.

## Horton: Award, Medal, and Grant

Peter S. Engleson

In the January 17, 1984, issue of the Go. 22), you will find the citation and acceptance of the 1983 without of the Robert F. Horton Award, David A. Woodluser. This velition of WherWay Ir commis a listing of post winners ot both the Horton Award and the Horton Medal. In addition there is a call for proposals for the 1934 Hotton Research Grant. That's a for of Honou, and experience has shown it to generate considerable confusion Here I hope to clarify matters by drawing months historical research of our past presidem. James R. Wallis.

In 1945 the Hydrology Section hist formally tyrognized contulations to the science of hedrology. This was done using two awards, a best paper by a young anthrog around which was first given to Heary Amberson in 1947; and an award for the most ourstanding complained by the science of hydrology pulslished in the Tomortion during the precenting sear. In 1948 Vincent J. Schaeler was its hist vinner. These awards were not given every year and during the period 1952-1955 there was not even a mention of them in the number of the writing

## Robert E. Horton Award

In 1955 Section President Barold G. Wilm suggested use of the Horton Fund to vover the cost of an award certificate and, with AGI Conneil approval, the Horiou Award way bone. It has been given each year sinve 1956 From time to time the crneric and method of selection have been modified by the action executive. The current guidelines for granting of the Hydrodogy Serumi's Horton Award are as Johnson

Thy award is to be given for a single nutstanding contribution to the science of hydrology made during the presenting a reads. The contribution may be tilt a single outstanding paper published in any journal; (2) I failets sicch, taken together, delore an ourst, noling contribution; (3) a service to the science which makes an omstanding tentidation, e.g., an outstanding meeting leading to a change in the vience; [4] any other contribution which the minimating commune regisilers worth.

Nominations for the award will be taken from any member of AGU. They must be avcomponied by a watters statement which gives the basis for nomination.

## Lhgibilay

Any member of the scientific constitutivity elimble for the Award. However, no one ordidual may receive the award tunge than once. The selection comsumes will have discretion for jointly authored work in which one author has already received the award,

Robert E. Horton Research Grant Finally, the Horton Research Grant was established in 1982 as a Hydrology Section

award. It uses income from the Robert E. Harton Fond to make a single, annual, comictitive research grant to a graduate student n hydrology at an American university. The lirst grant was awarded to Jane Stockman of Stanford University in 1983. I rerontmend that the next section exerntive give runsideration to changing the name of this award to emove some of the confusion.

Peter S. Engleon, president of the AGU Hydrology Section, is with the Massachusetts Institute of

## Robert E. Horton Award Winners

The Robert E. Horton Award is given anunally by the AGU Hydrology Section for a of hydrology maile within the last 5 years. The 1983 award winner is David A. Woolhiser for his contributions in the area of kinematic mixieling of surface water runniff and roverland flow (Eos. January 17, 1984, p. 22). Previous winners of the award are listed be-

## Other Awards

## Robert E. Horton Medal

In contrast, the Robert E. Horton Aledal is a Union award given in even-mimbered years upon recummendation of a subcommittee of the Union's Fellows Committee. It was first awanled in 1976 to the late Walter B. Langbein. The other winners to flate are Harold A. Thumas, Jr. (1978); William G. Ackermann (1980); and John R. Philip (1982).

## William Bowie Medal

The William Iluwic Medal is presented annually to recognize nutstanding contributions to fundamental geophysics and for unselfish cooperation in research. The first award was made in 1939 to William Bowie. Three hyrirolngists have received the award: Oscar Edward Meinzer (1943); Johannes Thendror Thijsse (1958); and Walter B. Langbein

## James B. Macelunue Award

The James B. Macelwane Award is given to recugnize the arhievements of young scientists (less than 3h yours old). Awards are made annually for significiant contributions to the geophysical sciences to young scientists of ling ability. The lirst award was made in 1962. Three lodrologists have received the award: R. Allan Freeze (1973); Ignacio Kodrlguez-Iturbe (1977); and Rafael L. Bras

## Fellows

AGU also provides recognition to leaders in the field of geophysics through the election of Fellows. The current AGU Fellows from the Hy-

drology Section are listed below: William C. Ackermann, Henry W. Anderson, K. H. Beij. John D. Bredehoeft, Arthur Peter S. Engleson, Allan R. Freeze, John C. Free, John C. Geyer, E. E. Harbeck. Max A. Kohler, Luna B. Leopolri, Ray K Linsley, S. W. Loliman, Nicholas C. Matalas,

Mark F. Meier. Dean F. Peterson, George P. Rigsby, Igna-cio Rodriguez-Iturbe, Philip C. Rutlerlge,

Charles V. Theis, J. Thijsse, Harold A. Thomas, David K. Todd, Gilbert F. White, 1981: J. C. I. Dooge, J. R. Philip.

1982: W. Brittsaert, P. Witherspoon, J. Weertman, R. 8ras. 1983: Jacob Rubin, Lynn Gelhar, James R.

## Horton Research Grant **Posposals Sought**

The American Geophysical Union is requesting proposals for the award of the Horton Research Grant. The proposal deadline is March 15, 1984. The grant will be in support nf research projects in hydrology and water resources by Ph.D. canthirlates of American institutions of higher education and is awarded annually to a single proponent. Its objec-tive is to loster graduate student research leading to the completion of doctoral dissertations. Proposals may be in hydrology (invhiding its physical, chemical, or biological aspects) or in the water resource policy sciences (including econumics, systems analysis, sociology, and law).

Proposals must be signed by both the sturlent and the faculty research supervisor and muss be received at the address below on or before March 15, 1984. The award will be in the amount of \$5,500 and will be made directly to the winner, selected by a committee of AGU's Hyrindogy Section during the 1984 ACU Spring Meeting. For a detailer descrip-tion of the grant and a guide for proposers,

Hoctun Research Grant American Geophysical Union 2000 Florida Avenue, N.W. Washington, DC 20009

## Information Report

## Data Harmonization and Model Performance

The Joint Committee on Urban Storm Drainage of the International Association for Hydraulic Research (IAHR) and International Association on Water Pollution Research and Control (IAWPRC) was formed in 1982. The current committee members are (no more than two from a country): B. C. Yen, Chairman (USA); P. Harremoes, Vice Chairmon (Denmarki; R. K. Price, Secretary (UK); P. J. Colyer (UK), M. Desbordes (France), W. C. Huber (USA), K. Krauth (FRG), A. Sjoberg

(Sweden), and T. Sueishi (Japan).
The IAHR/IAWPRC Joint Committee is firming a Task Group on Data Harmoniza-tion and Model Performance. One objective is to promote international urban drainage data harmonization for easy data and information exchange. Another objective is to publicize available models and data internationally. Comments and suggestions concerning the formation and charge of the Task Group are welcome and should be sent to: B. C. Yen, Dept. of Civil Engineering, Univ. of Illinois, 208 N. Romine St., Urbana, 1L 61801.

In addition to the Joint Committee there is also an informal group of interested people, known as the International Liaison Group on Urban Storm Drainage, comprising a correspundence network of people in more than 30 countries. The objective of both the Joint Committee and the Liaisnn Group is to promote international cooperation and development on the science and technology in urban

## News & Announcements

## Hydrology at the Spring Meeting

## Mesoscale Precipitation Fields

A special, full-day session on "Investigation A special, full-day session on "Investigation of Mesoscale Precipitation Fields" is being organized by the precipitation committee of AGU's Hydrology Section for the 1984 AGU Spring Meeting under the joint sponsorship of the Hydrology and Atmospheric Sciences sections. This session will contain about 10 invited talks by hydrologies at meant a feet at the process of the section of the hydrologies at the hydrologies at the section of the hydrologies at the section of the hydrologies at the hydr vited talks by hydrologists, atmospheric scien-tists, statisticians, and mathematicians, with a new locus on interdisciplinary research in modeling precipitation fields. In the evening, a 2-hour panel discussion will be held to explore in depth the scope of interdisciplinary

research and climatic variability. For additional rletails contact: Vijay K. Gupta, Dept. of Civil Engineering, Univ. of Mississippi, University, MS 38677 (telephone 601-232-

## Hillslope Hydrology

The Surface Runolf Committee is sponsoring a session on Hillshope Hydrology for the 1984 AGU Spring Meeting, Invited speakers include scientists from Australia, Canada, Germany, and the United States. For further details contact: l'eter Germann, Dept. of Envinunmental Sciences, Univ. of Virginia. Charlottesville, VA 22903 (telephone 804-

## Solute Transport in Groundwater

Two symposia on solute transpurt in groundwater, both sponsared by the Hydrol ogy Section's Groundwater Committee, will be held at the 1984 AGU Spring Meeting. A full-rlay session on "Miscible and Immiscible Transport in Grnundwater" will feature a panel discussion as well as invited and con tributed papers. Panel members include: Emil Frind, Lynn Gelhar, Bob Greenkorn Fred Molz, and George Pinder. A tentative list of speakers includes: L. Abriola, V. Corapcioglu, J. Cushnian, C. Faust, L. Gelhar, W. Gray, O. Gilven, D. Hochmuth, B. Lewis, G. Pinder, J. Rubin, F. Schwartz, L. Smith, and D. Sunada. For more information call lim Mercer. GeoTrans. at 703-435-4400, or Leonard Konikow, USGS, Reston, at 703-860-

A half-day session on "Field Methods for Supporting Chemical Transport Models" will provide a follow-up to the theoretical discussions featured in the companion symposium. A tentative list of invited speakers includes: Chin Fu Tsang, Joel G. Melville, Daniel B. Stephens, R. William Nelson, David Fryberg, and Erlward Sudicky. For more information contact Fred Molz, Auburn Univ., at 205-826-4326 or Mary Anrierson, Univ. of Wisconsin-Madison, at 608-262-239%.

## History of Hydrology

"History of Hydrology: Earth Science Aspects" is the subject of a half-day symposium at the 1984 AGU Fall Meeting IDecember 3-7, 1984, San Francisco). The symposium is being arganized by the new History and Hetnage of Hydrology Committee (HHHC) of AGU's Hydrology Section (a committee which will also function as a subgroup of the AGU Committee on the History of Genphysics). The symposium will cover historical aspects of the geological and genchemical study of surface and groundwater. Because this is a hirst-time effort by the HHHC, no initial restrictions on scope have been imposed in order to span a range of interests and to identify a population of individuals with historical erests within AGU and the hyrlrology community in general.

Areas of interest might include the work of individual scientists, the evulution of concepts, and the recelupment of techniques and methodologies. Persons interested in presenting a paper are encouraged to contact the um coordinator, Edward R. Landa. U.S. Geological Survey, 413 National Center, Reston, VA 22092 (telephone 703-860-6971)-

## Urban Hydrology

## Slorm Drainage

The Third International Conference on Urban Storm Drainage will be held in Goteborg, Sweden, June 4-8, 1984. Contact A. Sjoborg, Chalmers Univ. of Technology, Goteborg. Sweden, for more information. The Fourth Conference will be in late August 1987 in Lausanne, Switzerland, and the Fifth

Conference is planned for Tokyo in 1990.
The proceedings of the First International
Conference, held in Southampton, England. in April 1978, are available from Wdey-Interscience under the title "Urban Storm Drainage." The proceedings of the Second International Conference, held in Urbana, Illinois, in June 1981, are available from Water Resources Publications, Littleton, Colo, under the title, "Urban Stormwater Hydraulics and Hydrology" and "Urban Stormiyater Quality. Management, and Planning."

## Drainage Models

Under the cosponsorship of the IAHR/
IAWPRC Joint Committee, an international symposium on the Comparison of Urban Drainage Models with Real Catchment Data Drainage Models with Real Catchment Data will be held in September 1985 in Yugoslavia. Contact C. Masksimovic or M. Radojkovic; Inst. of Hydraulic Engineering, Bulevar Revolucije 78, Belgrade, Yugoslavia, The IAHR 21st Congress, In August 1985 at Melbourne, Australia, will hold a siminar on Urban Hydraulics. American contributions to both meetings are sought.

## Sewerage Systems

An international Conference on the Planning, Construction, Maintenance, and Operation of Sewerage Systems is being organized by BHRA and will be held in Reading, England, September 12-14, 1984.

## Stochastic Hydraulics

The Fourth IAHR International Symposium on Stochastic Hydraulics, cosponsored by AGU and the American Society of Civil Engineers, will be held July \$1-August 2, 1984, at Urbana, Ill. About 40 papers selected from submitted abstracts will he presented in the symposium.

Topics covered will include (but not be limited to) the following areas: risk and reliability analysis; safety of clams and other hydraulic structures; stochastic models; and stochastic processes of hydraulic and hydrologic phenomena surh as turbulence, sediment transport, dispersion and diffusium, and ran-

Reasonably priced housing is available. Contact B. C. Ven or Glenn Stout, Hydrosystems Laboratory, Univ. of Illinois, 208 North Romine St., Urbana, IL 61801 (telephone 217-333-0697 or 217-333-05361.

Cover. View from Volcanological Obser-

vatory of Rabaul Caldera (Blanche Bay), last erupted about 1,400 years ago. The low point of land on the left center is Ma tupli Island, site of approximately 1 m of oplift over the past 12 years. On the right is Vulcan, which erupted explosively in 1937 and again in 1941. Ground deforms tion and seismic activity may indicate the rise of magina beneath the center of the calriera. The town of Rabani and all settlements fringing Blanche Bay lie in the acea of highest risk should an eruption occur. A stage-2 volcano alert was declared on October 29, 1983, in response to the increased selsmic activity and ground defor mation observed in September and October. Seismic activity was concentrated near Tayurvor volcano in early November but activity then increased near Vulcan later in the month. Tayuryur and Vulcan erupted together in 1937. Monitoring and development of emergency plans conlin-ues. (Photograph by Stanley N. Williams, Department of Earth Sciences, Dartmonth College, Hanover, NH 03755.)

the Lagorn of Venice has been scheduled for March 21. A 2-day held trip from Venice onth to subsiding areas near Ravenna am Modena is scheduled for Alarch 24-25, following the symposium papers sessions. For further information contart A. Ivan Julius General Cochairman, TISOLS, Wunilward-Clyde Consultants, 7600 East Orchard Rd., Harlequin Plaza Nurth, Englewood, CO

## Karsl Water Resources

An International Symposium on Karst Water Resources, is scheduled for July 7-114 1985, in Ankara and Antalya, Turkey. Subjects that may be considered for the symposium include hydrogerdugy, geochemistry, modeling, laboratory testing, trarer techniques, geophysics and other exploration methods, land subsidence and sinkhole formation, remote sensing terliniques, groundwater and surface-water hydraulies and interprelation, engineering properties and pudi-lents, water-supply estimation, irrigation potential and ireigation prartice.

Turkey provides an especially anumuriate location for the symposium because of the quantity, variety, and importance of the karstic areas found there. The symposium is being spraisured by the Karst Water Resources Research Center Project of Hatertepe University, United Nations Development Program, United Nations Technical Cooperation Department, and the Turkish State Hydraulic Works, Cooperators will be the Turkish National Committee for the International Hydrological Program, the International Association of Hydrological Sciences, and other in-ternational reclinical societies and Phited Nations organizations.

Notice of intent to offer a paper or to attend the symposium should be sem to A. Ivan Johnson, Wondward-Clede Consultants 7000 East Orchard Rd., Harlequin Plaza North, Englewood, CO 80111, USA, or to Gultekin Gunay, Herbageological Engineering Dept., Hacenepe Univ., Engineering Faculty, Beytepe, Ankara, Turkey. They will send details on symposium arrangements and preparation of abstracts.

## Hydrochemical Balances

The International Symposium on Hydrochemical Balances of Frediwater Systems, will be held in Stockholm, Sweden, September 10-14, 1984. For burther information conta-M. Falkermark, Secretary, NFR's Communec for Hydrology, Box 6741, S-11385 Stockholm. Swerlen.

## Rocks of Low Permeability

The 17th International Congress of the IAH (International Association of Hulrogeo logists) will meet in Tucson, Aciz., Januart 7 10, 1985. The deadline for abstracts is March 1, 1984, and final papers are due Octuber 15.

The inpic of the rongress will be "Hydrogeology of Rocks of Low Permeability," and speakers will include W. Back, J. F. Bredehoeft, G. de Marsily, J. E. Gale, P. Fritz, L. W. Gelhar, G. E. Grisak, C. W. Kreitler, M. R. Llamas, T. N. Narasimhan, I. Neretnieks and E. P. Weeks. The congress will conclude with a panel discussion moderated by S. P. Neuman. Panelists include S. N. Davis, G. de Marsily, R. A. Freeze, P. A. Witherspoon, and I. Neretnieks

The Chairman of the Technical Program Committee is S. P. Neuman, Dept. of Hydrology and Water Resources, Univ. of Arizona, Tucson, AZ 85721, USA (telephone 602-621-7114 or 5082).

Field trips will fullow the formal presentations on January II and I2. In addition a field trip to the Nevada Test Site is scheduled for January 14.

## Salt Lake at Record Levels

Utah's Great Salt Lake rose 1.6 m between September 1982 and June 1983, the greatest seasonal rise measured in 136 years of record, according to a report published by Ted Arnow, chief of the U.S. Geolugical Survey (USGS) Water Resources District Office in Salt Lake City. The lake, which continued to rise after Arnow wrote his report, rose 25 cm in December, a record for a 1-nonth period. On January I the lake's height was measured at 1282.03 m above sea level, the highest since 1887.

The combined effects of above average rainfall in 1982, above average snowfall in the autumn of 1982 and the spring of 1983, and unseasonably cool weather during die spring of 1983 led to the record rise. By mid January the lake's continued rise lad cost \$250 million in damages and in

damage-prevention efforts. Flooding threatened to cut off Interstate Highway 80 and three trauscontinental rallroads. Both the level and quality of the water in Great Salt Lake fluctuate continuously, according to Arnow. "The changes are primarily in response to changing climatic conditions, but man's activitles have a lesser but still im-

portant effect." Since 1959, the lake has been bisected along its east-west axis by a railroad

ranseway that restricts natural circulation. This produces an elevation difference between the north and south sections; last year the suithern section was at times almost I m higher than the northern section.

The morthern section is salier 125% salinityl than the southern part 1997 salinity). (Seawater is considered to have a salimity of

Copies of the report, Water-Level and Water-Quality Changes in Great Salt Lake, Unh. 1847-1983 (USGS Girenlar 913), are available from the USGS Poblic Inquiries Office, 125 South State St., Salt Lake City, UT 84138.

## **Issues and Conditions** Summarized by USGS

A chronology of recent significant hydrolugic events, a state-hy-state analysis of water conditions, and key water policy issues are described in two reports published earlier this year by the U.S. Geological Survey (USGS).

In its 245 pages, the report Annoual Water Summary 1983: Hydrologic Events and Issues highlights water issues and related activities in all 50 states, the District of Columbia. Puerro Rico, the U.S. Virgin Islands, and the western Pacific islands under U.S. jurisdiction. Four concerns are addressed in this nate-by-state analysis; water availability, water quality, hydrologic hazards and land use, and nstitutional and management issues. A shruinduge of significant hydrologic events bepeen lannary 1982 and August 1983 is also included in the report. Capies are available for Steach from the Branch of Hisriburion, Text Products Section, 1'868, 604 South Pickett St., Alexandria, VA 2230), Ordere must specify water supply paper 2250 and must include a check or money order made payable to the Department of the Interior/

Six judicy issues are identified and discursed in the second report, Water in America 1983: river management improvement, interstate water couldn'ts, water project development, Indian water claims, and water quality as it relates to acid rain and to salinity. The 20-page report also fucuses on the changing roles of the federal, state, and local androniries. Copies should be requested from the Director, Office of Policy Analysis, Department of the Interior, Washington, OC 20240.

## Meeting Reports

## Groundwater Management Modeling

The symposium on Optimization Techniques for Managing Groundwater and Stream-Aquiler Systems, held at the 1983 AGU Fall Meeting, covered (1) small-scale np timal design of well helds which were for the most part associated with the containment of rontaminated groundwater, and (2) use of management mindels to evaluate conjunctive use and water allocation policy. The presentations focused on methodology and case studies which have combined groundwater flaw (and contaminant transport) simulation with

linear and nonlinear optimization. The 8 presentations and panel discussion brought together those who have largely shaped the field of groundwater management modeling and those who have extended and applied earlier methods and made contributions as part of recent or ongoing thesis work. After the formal presentations, Man-outch Heidari chaired the lively panel which consisted of Nathan Buras, John D. Bredehoeft, Yacov Y. Haimes, Thomas Maddock III, Gerakl T. O'Mara, and Robert Willis.

Three topics of key interest dominated the nudience's questions and the discussion: What is the purpose of groundwater und conjunctive-use management modeling? How can such models be effectively utilized? Can parameter uncertainty be better incurporainto the management-modeling methods? The discussion emphasized the importance of the simulation-management method as a tool to aid in understanding the physical as well as economic controls of stream-agnifer resource utilization, rather than as a technique for hythrogeologic englneering design.

This meeting report was prepared by Steven M. Gorelick, who is with the U.S. Geological Survey. Mento Park, CA 94025.

## Transport Processes of Excessive Sediment

The session on Transport Processes of Excessive Sedlment Loads at the 1983 AGU Fall Meeting featured an excellent summary by H. W. Shen of the general points of the prevailing theories of transport mechanisms of high sediment loads, including both U.S. and Chinese work on the topic. The session attracted interesting papers and a good audience. The panel discussion after the papers was quite lively and contributed to the general understantling of the tople. Ray Krone gave a status report on the work of the American Society of Civil Engineers on excessive sediment loads, and goidelines for fload insurance for mull-flood events was dis-

The field reports pronted out the important rifferences in the types and mechanics of flows in clifferent areas. For example, the influence of geology on the Hows in the Los Angeles area compared with the Mt. St. Helens area was quite striking. The schedule did not permit extended discussion of the theory papers. From the success of this vession it aprats that excessive sectiment loads will be a lively toquic for several years.

This meeting report was prepared by Karen L. Prestegaard, Funklin and Masshall Callege, Lancaster, PA 17604.

## Orinoco and Amazon

Although much of the research being done un these rivers is still in its early stages, the misprint in the 1983 AGU Fall Meeting abstrarts issue of Eos (November 8, 1983, p. 697) appears to be correct: These rivers are upical as well as tropical. The series of pa-pers by Meade, Nordin, Dunne, and Mertes provided some interesting discryations (for example, the rivers exhibited complicated

lungitudinal sariations in sediment storage). R. F. Stollard presented an excellent paper on mixing in large tropical rivers. The Orinoco and Amazon Rivers have lairly low sinnosities, and high width/depth ratios. These characteristics might be responsible for the abservations made by Hileria and Stalland that the tribinary water chemistry is not mixed across the main claimel for distances of several limidical kilometers.

The research on these large rivers illustrated that large rivers do not behave simply as apscaled versions of smaller rivers. The incportance of large vivers as water and hydroelectric power resources as well as the importame of the Amazon Hasin vegetation as a storage reservoir for carbon dioxide makes research on these rivers quite important.

This meeting report was perputed by Karen L. Presteguard, Fronklin and Machall Hollege, Lancaster, PA 17601.

## On The Waterfront

Infa L. Wilson has accepted a professorship at the Department of Geoscience, New Mexivo Institute of Mining and Technology, So-

vorro, N. Mex Frank W. Schoortz has been mained the 1981 Birdsall Lectorer. The Bridsall Lectory Series is sponsored by the Hydrogeology Dicision of the theological Society of America David A. Stephenson has joined Water Resources Associates in Phoenix, Auz.

# **Books**

## Atmosphere, Weather, and Climate

R. G. Barry and R. J. Chorley, 4th ed., Methwen, New York, xxiv + 407 μp., 1982.

## Reviewed by J. T. Houghton

The loutth ethition of this hook, hist published in 1968, is to be welcomed. It is widely used in geography courses in schools and universities and has had considerable success in introducing, with the minimum of mathematics, synoptic and dynamic meterology and climatnlogy into such courses. Its chapters cover atmospheric compusition and energy, atmospheric niuisture, aimospheric motio air masses, fruits and depressions, weather and climate in temperate latitudes, trupical weather and climate, small scale climates and climatic variability, trends and fluctuations.

The main changes in the fourth edition have been in the last two chapters, which have been substantially rewritten. The chapter on small-scale climates gues into considerable detail concerning the energy balance user different surfaces and ulso discusses the ence of n on the local rlimate. The first chapter on climate variability and rhange first presents evidence for climate change in the past and then briefly mentions, with virtually no rliscussion. a few possible causes of climate change. The possible influence of the ocean, for lustance, is given only four seniences!

Since the first edition ul the book, there have been great arlyances in the modelling of climate through global general circulation models and a large amount of interest in the oceans as an important component of the climate system. It is a pity that the upportunity of this new edition was not taken to describe modeling techniques (the word model hardly occurs) and to expound a lew uf the results. fur instance thuse associated with the influence of ocean temperatures or widt increase in carbon dioxide.

A more minor issue concerns units. Caluries are still extensively used in the book. Would it not be less confosing to the student and in line with international recommendations if watts were employed throughout?

1. T. Houghton is director general of the Melesogical Office, Brackwell, Berkshire, RG12 2SZ

Program Manager/Alr-Sen Interaction. NASA Healquarters' Oceanic Processes Branch is seeking candidates for planning, developing and implementing a scientific research program utilizing satellite terliniques in the general area of air-sea interaction. Specifically included is the use of satellite scatterometric to characterize the surface wind field, and the effect of surface winds on upper-ocean corrents. Qualifications include 1) ability to communicate effectively, 2) demonstrated experience in conducting original research, 2) programs management experience, and 4) knowledge of physical oceaning rapha, 48–11/15, with salary ranged from \$41,277 to \$61,115, commensurate with experience/enheamin. raphy, 68 (1715), with salary ranges from \$41,277 ( \$63,115), commensurate with experience/education. For butther information regarding requirements and application procedures write to address below in phone 202-755-9887. Formal applications must e icceived by May 6, 1984 NASA Headquarters, Code NHP, Washington, D.C.

An equal opportunity employer

Clay Mineming/University of Illinois at Urbans-Champaign. The Department of Geology invites applicants for a termostrack family portion in clay mineralogy. We are serking cambinates who have clearly demonstrated the potential to be outstanding researchers in the general areas of mineralogy, crys-tallography and chemistry of clay minerals, in the origin, diagenesis, and metatmorphism of an gilla-crous sediments and whose hume research will complement our existing programs in the petrology and diagenesis of sediments, experimental studies of compaction and of kinetics of burial diagenesis, be-havior of clay minerals churing deformations, petro-leum geology, and stable isotope geochemistry. In addition to the development of a strong research program, the successful candidate is expected to participate in all aspects of true lung and advicing at the graduate and undergraduate levels. immediate Openings for M.S. and Pb.D. Graduate Research Assistantships/Laboratory for Atmospheric Research, College of Engineering, Washington State University. Current research includes measurements of hydroxyl radical concentrations; bingenic sulfur and hydroxarbon emission rates; global chemical concentration in remote forations; invertigations of atmospheric transport in complex curroundings; studies of pollutant-vegetation interactions. Write Mr. Bob Koppe, Laboratory for Atmospheric Research, Washington State University, Pullman, WA 99161.

WSD 35 an entail unportunity/affirmative action. WSD is an equal upportunity/affirmative action

> Colgate University. The Department of Geology at Colgate University anticipates one or more openings in the tear hing farulty beginning in the Fall of 1981. These openings may include a full-time appaintment tenewable for a maximum of three years at the assistant professor level (Ph.D. required). A second position at the instructor level would involve projective laborators teaching. One position may be serous position at the instructor level whilst involve primarily laboratory teaching. One position must be filled by a cambilate capable of teaching undergrad-nate occanography and/or physical geology. Areas of further expertise are presently less restricted and could include any of the following disciplines: Eco-nomic Geology, Engineering Geology, Geomorphol-ogy, Glacial Geology, Hydrogeology, or Marine Ge-

Applicants should submit resume and the names of addresses of three references to Or. Bruce Seleck, Repartment of Geology, Colgate University, Familion, NY 13346. Closing date for applications

Hamilton, NY 15540, Valoring said for applied in Marth 15, 1984.

Posidoctoral Position/Atmospheric Chemistry, A posidoctoral position is available for a person with a Ph.D. degree in chemistry tyreferrably ana-lytical or physically or inicioneteorology. The posi-tion involves the measurement of armospheric acidity and the dry deporition of trare gases from tow ers and aircraft. The successful applicant will be expected to travel to a variety of field sites and to

expected to travet with variety of new sites and to perform cleenical analyses using into chromatography. A facility with computer programming, the labritation of research equipment, and careful chemical commination-control would all be useful. This is a two-year full-time position, with an annual salary of \$15,000 during the first year, to begin in the summer of 1984. Interested persons should send a resume, names and plume numbers of three references, a statement of these references, a statement of these references. any reprints to Barry Huebert, Department of Chemistry, Culoraria College, Colorado Springs, CO

Colorado College is an equal appartunity employ-

Buseau of Mineral Resources, Geology & Geo-physics: Research Scientist/Senlor Research Scien-tists, Marine Geophysiclets. The Division of Ma-rine Geostiences and Petroleum Geofogy in the Australian Itureau of Mineral Resources, Canherra, Australian Bureau of Miner al Resources, Canberra, has vacancies for Marine geophysicists 13 positions). The principal research aims of the Marine Division are to define rhe regional geological framework, petroleum prospectivity and evolution of the sedimentary basins of Anstralia's extensive confinental shelf and margins; further to develop new scientific roucepts of basin structures and evolution of passive margins and also the active margins of the South Pacific. The main objective is the simulation of on-going programs of olfshore petroleum exploration. The Division is presently in the process of arquiring a research vessel and seisroic processing centre.

The successful candidates should be experienced in millichannel seismic operations, in selsmic struc-tural and stratigraphic interpretation and in an lean some aspects of grollistory analysis. Associated experience in other fields of marine geophysics and pelrodeum would be valuable but not essential. Classification will be at Research Scientist or Senior Research Scientist level depending on the successful cardidate's qualifications and experience. Qualifications: A Ph.D. (or equivalent) in waring gophysica together with demonstrated research

Salary: Research Scientist (RS)—\$A24344-\$A30038/Senior Research Scientist (SRS) \$A31092-\$A35801i. Conditions: Conditions of service include supercontinuous: Conditions of service teclude super-annuation, long service leave, four weeks annual leave and removal expenser to Cauderra. Perua-nent appointment is available to persons who are Anstralian citizens. A term engagement will be con-sidered for persons not meeting this criterion. Camberra, the national capital, is located approxi-tated 2801 to mathematic California. Camberra, the maintest capital, is accased approximately 280 km southwest of Sydney and has excelent educational, recentional and spurting latilities.

Applications together with full personal and professional details and the names of at least three ref-

University of British Columbia. Recent Ph.D. with experience in statistical methods and geophysical fluid dynamics sought to participate in the analysis and interpretation of dwa from an array of cyclesouries (proliting current meter, CTD systems) and current meters in the Strait of Georgia. The candidate should also have the potential of modeling the observations in terms of the non-linear low frequency notion of a stratified fluid of variable depth. The mosition is available as of 1 November, 1984, for a duration of one year and may be renewed for a second year; it will be filled at postdoctoral to \$20,700) or research associate (up to co. \$27,000) level according to the candidate's expendence. In accordance with Ganadian immigration requirements, priority will be given to Canadian chizens and perioment residents of Canadia. Resumes and three letters of reference should be sent 1 July 1984 to Dr. S. Pond, Dept. of Decenography, 6270 University Blyd., Vancouvec, B.C., Canada Vet 1 1985.

Planetory Geologiat/Geophyalelstr Jet Propulaton Laboratory, Earth & Space Sciences Division. The Planetary and Oceanography Section acticipates the availability of one or two fulltime, staff reientles to availability in one or two fullings, staff recents to search positions in the areas of planetary geology and geophysics. The rank of appointment is open, but applicant should be beyond the postdotoral level with a demanstrated record of expertise and accomplishments in independent research and publication. We welrome applicants with interest in STRIPTICAL geology and geophysics as applied to the lication. We welcome applicants with interest in structural geology and geophysics as applied to the study of solid-body planets and natural satellites with emphasis on determining surface properties and processes on planetary objects using ground-base and spaceraft remote sensing flata and applicable theoretical and experimental techniques. Applicants rhould send letter onlining their experience, professional goals, resume, and copies of ence, professional goals, resume, and copies of pertinent publications in: Dr. William R. Ward, Manager, Planciology and Oceanography Section, let Propulsion Laboraury, 4800 Oak Grove Drive, Dept. L34, Mail Stop 249-104, Pasadena, CA 91109, An equal opportunity employer m/l.

hept. L34. Mail Stop 249-104, rasaucus.

An equal opportunity employer m/l.

Research Position in Space Plasma and Auroral Physics. Two research positions at the level of assistant or associate research scientists are available in the Department of Physics & Astronomy at the University of lows for qualified candidates with o Ph.D. degree and experience in space plasmas and/or auroral physics. Present research in space plasma physics emphasizes malysis and interpretation of observations of magnetospheric plasmas using instrumentation on board carth-orbiting space and the IMP and ISEE Missions. The University of lowars global imaging instrumentation on the space craft Dynamics Explorer I is the source of an existing sive data base of auroral images from high attituded at visible and oltraviolet wavelengths. Photometric observations are also available for other areas of research including the physics of the upper atmosphere and the global distribution of stmosphere ozone. The applicant should identify and despribe areas of his or her expertise which can support experimental or theoretical investigations in space plasma physics and/or surporal physics. Salary and position will be determined by the applicant squall incations and experience.

A resume and the highes of thirds persons knowly edgeable of applicants experience should be forwarded to Link Franks, Department of Physics and opportunity physics with an attrimative action, equal opportunity physics in an attrimative action, equal opportunity physics.

Postdectoral Position/University of Washington, Research Associate (postdortoral) with back-ground in physical occanography or atmospherir sciences and interests in dynamical asperts of cfi-mate variability. Term of apprintment: one (1) year, renewable for a second year subject to the approval of the Council. Closing date: March 15, 1984. Send curriculum viace and a list of four (4) references to Director, 11SAO. Cu Decartment of Atmospheric CHTECOMIN VIGE AND A FOR A TOTAL CONTROL OF THE CON

An equal opportunity/afternative action envitor

Assistant Professor. The Coastal Studies Institute of Lonisiana State University, Baton Rouge, is inviting applications for a laterity position in Physical Oceanography. Cambidate should have experience in the throtelical, numerical, or laboratiny studies of the rhyamirs of marginal seas, straights, shelves, etc., and candidates should plan on developing an externally lunded reserrach program wide emphasison, but not restricted to the above area. Send curriculum vitae, cesearch interests and a list of references to: Stephen P. Marray, Coastal Studies Institute, LSU, Baton Rouge, LA 70803 or call 504-388-5901.

LSU is an equal opportunity employer.

Postdoctoral Position/Balhousic University. A two-year position in the Oreanography Department is available for a person interested in marine geophysics. Specific work involves partiripation in heallow studies across the margins of eastern Canada but broadec oppositunities also exist on self-moleated projects within the University or at Bedford Institute of Oceanography. A Ph.D. in geophysics and desire to work 1-2 modyr at sea are required. Experience with heat flow helpful but not essential. Send C.V. and names of two references to: Dr. K. E. Landen, Dept. of Oceanography, Dalhousie University, Halifax, NS, Canada, BSH 4J1.

Physical Oceanography/Skidnway Institute of Oceanography. A physical orcanographer with a Ph.D. is being sought to comburt research on the continental shelf. Preference will be given cardidates with expertise in theoretical physical oreanography and who are interested in studying and modelling ocean-estimative early approxesser and/or continental shell circulation. Such studies will complement and grainle experimental programs presentcontinental shell circulation. Some attention of the plement and guide experimental programs presently being conducted at the Institute. The selected applicant will be appointed at a level and salary commensurate with experience.

Interested persons are encouraged to submit a resume, the names of three individuals what an least the following applications of the program of the selected for a forest purpose and a course.

contacted for reference purposes and a rourise statement of research interests to: Itr. Jackson O. Blanton, (912)356-2457, Skidaway Institute of Oceanography, P.O. Bux 13087, Savannuli, GA 31416 before the ilealline of March 30, 1984. The Skidaway Institute of Oceanography is an equal opportunity/affirmative artion employer.

Research Associates. The Department of Earth and Spare Sciences at SUNY Stony Brook invites applications for a Research Associate position. Can-didates should be experienced in application of Electron Microprobe and Analytical Electron Micro-Electron Microprobe and Analytical Electron Microscope techniques in geologic materials. The Department has a JEOL 2006. Electron Microscope will EDS and will be purchasing a new Electron Probe in 1984. Daties will include equipment maintenance, instruction of graduate trulents on equipment maintenance, instruction of graduate trulents on equipment are and research both independent and in conjunction with Gradty. Familianity with computers and fortran programming required. A PhD is preferred, Salace is negotiable, but we anticipate a range of \$18–23K. Send letter of application, resume and names and addresser of three references by March 31, 1981 to: Dr. Steven Bohlen, Itematinent of Earth and Spare Sciences, SUNY Stony Brook, NY 11794.

Alr Force Geophysics Laboratory Geophysics Scholae Progsam (1984–1985). Or. M. A. Dungan (21 It 692-2752) Department of Geological Sciences Southern Methodist University Dallar, Texas 75275.

Stato University of New York at Buffalo/Assistant-ship Opportunities. The Repartment of Geological Sciences invites graduate applicants for Fall 1984. Graduate/Feaching assistantships offer a stipend up to \$5500.00 for 10 months, plus totion waver. Special assistantships in geophysics, geocheigistry-mineralogy, and glaciology carrying a 10-month stipent of \$7200.00 plus rottom waver are available. Adultismed summer support is possible. Applications can be obtained from the Department of Geological Sciences, 4240 Ridge Lea, Ambers, NY 14226, 716-831-2031. Reading for regist of all materials is March 30, 1984.

cipt of all materials is March 30, 1984. The State University of New York at Bullalo is an afternative action/equal opportunity enquoyer and invites opplication from minority and women candidates. No person in whatever relation with SUNYAB shall be subject to discontinuation on the basis of age, ruler, national origin, sare, religion, os

## 1983 Bucher Medal

John W. Handin

 $\frac{1}{2} \sum_{i \in \mathcal{I}} \frac{1}{2} \frac{1}{2} \sum_{i \in \mathcal{I}} \frac{1}{2} \sum_{i \in \mathcal{I}$ 

Citation It is hard to think of any presentation of an award more pleasurable to give or more de-serving of receipt. John Handin, this year's Walter H. Bucher Medalist, has been one of the most distinguished scientists in the Bucher tradition. John's research has been devoted to the application of mechanics to the understanding of the deformation of the earth's crust. He is the preeminent leader in experimental studies of rock deformation. Along with King Hubbert he put together the superb group of rectonophysicists at Shell's research labs in the 1950's and early 1960's.

for Tectomophysics, which originated with Handin, grew to its present excellence under

Since then, Texas A&M's outstanding Center

Handiu served in the U.S. Army in the artillery following graduation from the University of California, Los Angeles (UCLA), in 1942. After the war he went on to get his Masters and Ph.H. degrees at UCLA. His dissertation seas on clastic sedimentary processes but, it a posido toral appointment with ltavid Griggs, who had just arrived at CELA. John rurned hir aneution to experimentation on the deformation of rocks under confining pressure. Just as Buylier turned to models in explant some large tectunic enigmas. Handin performed experiments which have elegantly lemonstrated the inccliantical principles inderlying field observations of ductility and faulting of 10cks.

The classic set of papers on Vule Marble by Griggs, Turner, Handin, and Borg led to the first predictions of calcite labor, by Handin and Griggs based on the deformation mechanisms of calcite. This body of work provided much of the basis for the next 3 detades of experimental studies of the plastic deformation of rocks. His Geological Society of America memnir, Rock Deformation, with D. f. Griggs, was vielt with new directions for research in the subject.

Handiu's 1963 paper with colleagues Hager, Friedman, and Feather on the effect of fluid pressure on the fracture strength of sedimentary rocks was a milestone. Following Hubbert's and Rubey's theoretical argumen their experiments were such a clear and tlecisive demonstration of the effect predicted by Hubbert and Rubey that their hypothesis was

essentially proven.

John Handin has had an influence on his field disproportionate to his distinguished published work. For thuse of us fortunate enough to have worked with him, John has been the very model of a scientist. Integrity, nsument to exacting measurements and critical judgment of one's own ideas, the sine qua non of science, are a Handin specialty.

The state of the s

The state of the s

Moreover, his papers are among the most hicid and concice in our field. John hav a drlightful knack for raying a great rlead in a few well-clowen words. All these victores would be quite unbearable if it weren't for the fact that fului Handin ir one of the kindest mentors and warmest friends that can be found.

The Walter H. Bucher Medal is given for Hambu's stylking and probanul scientificaccomplishments. Speaking for his colleagues and former sindentr, his good friends, this award is righly deserved for that and for unch more. Our a jence, the institutions he has served, his students and colleagueswhatever John Hamiliu has touched is better for his contact.

Acceptance

Walter Bucher helpfil my career long hefore I met him. His classic treatise. Helpowarnot of the Earth's Crust, excited a generation of readers and taught it much about not merely the lacts of nature but also the inductive methods of natural history that every geologist must learn above all. Recently Terry Eugelder kindly found me a copy of that oncefancous book. It must once have belonger to the great Charles Schnichert, for inside is pasted a letter written him by young Bucher out of gratitude for euronragement of pioneering work. When my friend and mentor, David Griggs, accepted this award a decade ago, he said of Bucher, "in me, as in his other lisciples, he created the feeling that my thoughts were of great import to his understanding of the world." Grigg's followers became likewise devoted to him, and we still enjoy a very special kiuship. In wonderful successinn we learn and knowledge grows. I reckon professional life's dearest prize is the respect of one's peers, but teachers are riquely rewarded by the achievements of their students.

I am reminded of a quieter time thiring the 1950's when our Union's entire membership could comfortably convene in the Natinual Academy's small tooms on Constitution Aveime, and young scientists could freely mingle with the truly great. But hindsight of the good old days also reveals that the tools of our trade were crude, research funding of the geoscience was pitifidly small, and our tiny haint was overwhelmed by a host of challenging problems -some only just stirring. like preservation of a healthy environment and depletion of natural resources. The elecfromevievolution has given us high-speed digital computers and high-resolution instrumentation. Numerical modeling has become a powerful tool for testing hypotheses. Adrances in data processing have rendered the nverlunden all hin transpacent. Ecen cervslow crystal deformations are measurable in real time. As the dramatic growth of our Umon arrests, never has our science been more vigorous. Its future should be still brighter—if only civilization can spryive.

As an experimentalist, I am especially pleased by this boilor because laboratory work on bits of the crust is hardly glamorous Experimentalists must not work alone, for without meaningful applications, usually fullowing years behind, their data are useless. So, this happy occasion overs much to King Hubbert's advocacy of the integrated prograss of theoretical, experimental, and held research on rock deformation that his flourshed for 30 years, first at Shell and later at Texas A&M. And so, owing not to false more esty but to the simple truth, I must accept this award on behalf of all the exceptionally talented collaborators who have breally supported me and been my staunch friends in

good times and had. Having spent must rif the last 10 years in acadeuric administrations and virtually all my prufessional life in Texas, I am pleased too by the implications that scholarship and its fostering are both Isonorable and that reputable research can be tione somewhere between the East Coast and West Coast and south of Chicago.

SECTION LUNCHEONS

and Petrology, Monday, \$9.50 Geomagnetism and Paleomagnetism,

Planetology/Volcanology, Geochemistry,

registration material. Registration hours are \$ A.M. to 4 F.M., Monday through Friday, On Sandar, May 13, 100 may register from 520 P.M. 16, 7:30 P.M.

## Hotel Accommodations

Blucks of rounns are being held at the Clasion Hotel (formerly Steadler's) and at the Netherland Plaza for those anending the Spring Meeting. The Clarica 1955 single, \$65 doublet is immediately adjacent to the Convention Exposition Center. The Netherland Plaza (Sāti single, Stiti deadde) is approximate ly three blocks from the Center, easily accessble he the skywalk system.

thatel reservations must be received by April 16, 1984, to be confirmed. Mall the completed housing form directly to the held of your choice. Du not write or lelephone AGU for housing reservations.

## Scientific Sessions

The program summary will be published in the March 27 issue of Eux. The preliminary program with the abstracts will be published n the April 17 issue of Ers. The final meetin the April 17 issue of 20%. The man neers ing program, with presentation times, will be distributed at the Spring Meeting, Scientific sessions will be field at the Convention—Expusition Center.

## Exhibits

Exhibits of instrumentation equipment. book publishers, programs of government agencies, and other organizations will run from Tuesday, May 15, to Thursday, May 17. 9 A.M. to 5 P.M. daily

## Special Events

An icelircaker party on Monday evening from 5:30 to 7 P.M. will be the opening social event of the ourering.

The Honors Ceremony, Reception, and President's Dinner in honor of the medaliss, awardees, and Fellows will be held on Wednesday evening, May 16.

Camplimentary refreshments will be sened Monday through Friday at the Center, 9:15 to 11 A.M. and 2:30 to 4:15 P.M.

## **Business Meetings and Section** Luncheons

The AGU Council will meet Tuesday. May 1a, at 5:30 P.M. The annual busines meeting of the Union will follow the Council Meeting. Members are relcome in attend. Section huncheous will be held at the Clarion Hotel; room beations will be published later. Please indicate on the egistration form which Inncheon you plan to attend and include payment.

The Geomagnetian and Paleomagne-ilam inneherat and the Planetology/Volcanology Petrology, and Geochemistry lunchem will be held on Monday, May

The Selamology and Tectonophysics micheons will be held on Tuesday, May

The Hydrology, Ocean Sciences, and Solar-Planetary Relationships luncheon will be held on Wednesday, May 16.

The Almospheric Sciences and Geodesy hinchemis will be held on Thursday.

Refer to the registration form for cost.
